CONCLUDING THE IMPLANT

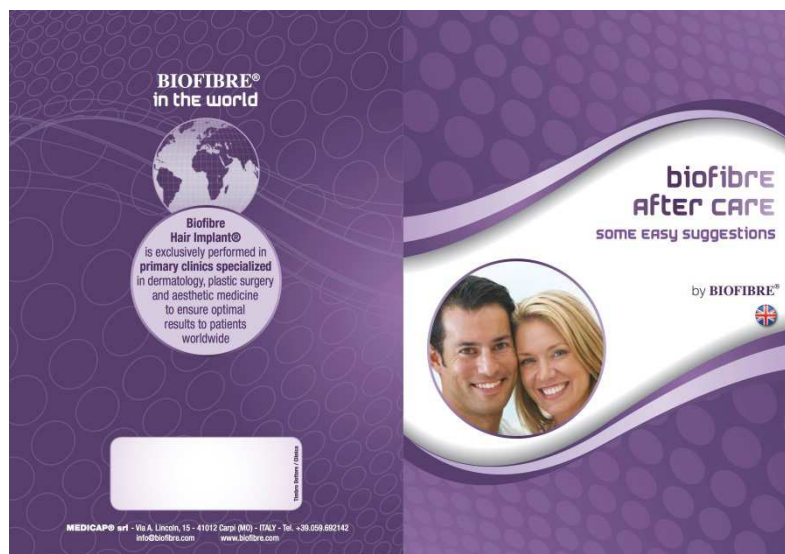

FOR THE DOCTORS

- *Clean the implanted area with hydrogen peroxide and betadine without any fiber's traction,*
- *provide a broad-spectrum antibiotic systemic therapy, e.g.: azithromycin (Zitromax 100 - 3 days), tetracycline (Minocin 100), cephalosporins (e.g. Panacef 750 retard) and apply a topical antibiotic in lotion as : clindamycin (e.g. Dalacin), gentamicin,etc*
- *apply ice pack protected by gauzes for 5-10 minutes,*
- *comb the implanted fibers with a disinfected wide tooth comb, holding them at the base with the fingers to prevent surfacing,*
- *if necessary, administer the patient with an analgesic,*
- *in case patient wears a hat, cover the implanted area with gauze to avoid contact with dirty surface*

AFTER INTERVENTION AFTER CARE

BOOKLET FOR THE PATIENT

On following days after implant patients must respect medical prescription (see below) and abide to after care rules as listed on leaflet.

BIOFIBRE®

HIGH TECHNOLOGY HAIR IMPLANT SYSTEM

www.biofibre.com

COPY FOR THE PATIENT

HOT CLIMATE

1. clean with betadine and spray saline solution for 2 days
2. give systemic antibiotic (e.g. cefim 1 tab. x day x 6 days)
3. on 3rd day wash with neutral shampoo and spray with anti-fungal at night (e.g lanisil spray or Skin cap spray or econazol sandoz)
4. use neutral shampoo every 2-3 days.
5. apply anti-fungal spray (lanisil or skin cap or econazol sandoz) every night for 10 days and sleep over . then once per month.
6. use nizoral shampoo once a week for 5 weeks. Then 1 or 2 times per month.
7. Perform periodical medical check-up every 30-60 days or in case of needs

AFTER CARE INVOLVING PRP PROCEDURE

In addition to the after-care protocol you can use PRP procedure on the scalp according to following :

PRP IN BIOFIBRE HAIR IMPLANT

- 500 hairs= 1 PRP after 1 or 2 weeks .
- 1000 hairs= 1 PRP, once a week for 2 weeks.
- 2000 hairs and up= 1 PRP, once a week for 3 weeks

1 PRP should be performed before each implant session

-In any quantity: after giving the required number of PRP session/s, the following months 1 PRP have to be performed as maintenance or when is needed.

IMPORTANT

*Make sure that the scalp is clean and not infection. if so clean it well with saline and betadine, spray it with skin cap spray and put a fucidin cream with tetracycline ointment.

*Instruct the patient to clean it every night then after one week instruct patient to come back for the PRP session.

DERMATOLOGIC CONTROL at 30 DAYS or before in case of needs
